

PROG7311 POE Part 1 Student Guide

1. Overview of Part 1

This part focuses on planning and architectural thinking. No coding is required. Your goal is to demonstrate how your solution addresses the business problem and provides value.

- Understand the scenario and business problems
- Focus on planning, design, and justification
- Write for non-technical stakeholders
- Support all decisions with reasoning

2. Report Structure

- Cover Page with all required details
- Table of Contents
- Executive Summary
- Introduction
- Main Sections for each question
- Figures and diagrams clearly labelled
- References and bibliography
- Word count between 1000 and 1500 words

3. Writing Approach

- Write for business stakeholders, not developers
- Avoid technical jargon unless explained simply
- Focus on business value and impact
- Keep paragraphs concise and structured
- Use headings and subheadings clearly

4. Question 1 Guidance

- Clearly name the selected framework
- Explain the framework in simple terms
- Justify why it fits the business scenario
- Apply the framework to the given system

- Use a labelled diagram to support explanation
- Relate framework elements directly to the scenario

5. Question 2 Guidance

- Select three design patterns
- Explain each pattern simply
- Show how each pattern applies to the system
- Explain business value of each pattern
- Ensure patterns work together logically
- Include a UML class diagram
- Follow correct UML notation and structure

6. Question 3 Guidance

- Define each concept clearly
- Explain why it is important to the business
- Relate each concept to the system
- Provide practical strategies for implementation
- Use specific tools or technologies where relevant
- Be clear and structured in explanations

7. Diagrams and Figures

- Include diagrams to support explanations
- Label all figures clearly
- Reference figures in the text
- Ensure diagrams are neat and readable
- Focus on business flows rather than only technical detail

8. Final Tips

- Stay within the word count
- Ensure clarity and professionalism
- Proofread your report
- Test readability with a non-technical reader
- Ensure alignment with the marking rubric
